

ALCHEMY SOLUBETM

Bio-enriched Organic Manure

- ALCHEMY SOLUBE is FCO approved Organic Fertilizer, a perfect blend of organic carbon & four types of plant beneficial microbes.
- ALCHEMY SOLUBE contains broad spectrum range of microbes like N, P, K and ZN solublizing bacteria along with organic carbon.
- ALCHEMY SOLUBE contains 14% organic carbon, having narrow C:N ratio which results in to rapid multiplication of beneficial microbes in soil.
- It contains nitrogen, potash and micro nutrient in organic form.
- ALCHEMY SOLUBE is water soluble Organic Fertilizer having perfect blend of plant beneficial microbes and organic carbon which improves soil fertility and availability of chemical fertilizers.
- ALCHEMY SOLUBE is water dispersible and hence can be applied through drip irrigation and also by drenching.
- ALCHEMY SOLUBE is most suitable to make compost tea.
- As we know organic carbon is source of energy for microbes in soil, microbial population in soil depends on organic carbon. In this product C:N ratio is below 18 which results into fast growth of microbes in soil.

Linking Labs to Land

ALCHEMY SOLUBE contains broad spectrum range of microbes like N, P, K and ZN Solublising bacteria with total viable count (5×10^7) CFU colony forming units .

ALCHEMY SOLUBE helps in nutrient availability .

As ALCHEMY SOLUBE is water soluble it reaches to root Rhizosphere and due to high microbial growth of N, P, K and ZN Solublising bacteria it reduces PH of Rhizosphere which encourages availability of major and micro-nutrients . Thus it helps to improve fertilizer use efficiency in soil .

ALCHEMY SOLUBE improves soil structure by decomposing soil organics and increases humus level in the soil, results in to better moisture retaining and improves buffering preparing of soil .

ALCHEMY SOLUBE is easy to apply .

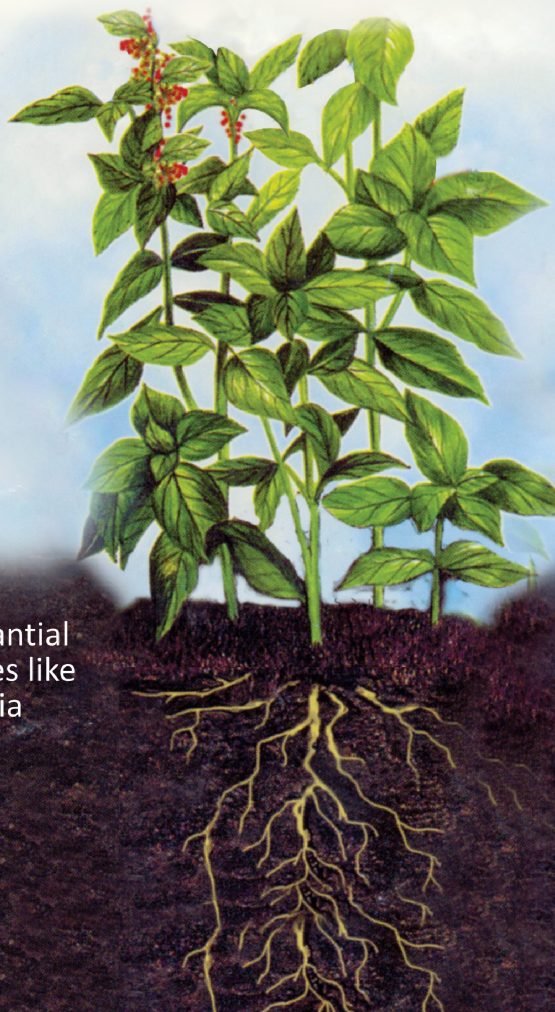

ALCHEMY SOLUBE is available in 10kg HDPE .

*ALCHEMY SOLUBE is applied to soil by drip or drenching only and should not be sprayed

How ALCHEMY SOLUBE Works

Increases flowering and fruit bearing

Due to Organic carbon substantial Growth of Beneficial Microbes like Phosphate Solublising Bacteria (PSB)

Regularly and Fully available Humus tied Phosphates

Get Stable Humus

Profuse Growth of White Roots due to properly available Phosphate.

Nitrogen, Potash and Micronutrient available in Organic Form
